Hang heavy 6” aluminum spherical ball from the ceiling mount (in room 1001 Malott) in front of the lecture table. Use pin (chained to ceiling mount) to hold fitting in mount. (SEE WARNING.)

Have a student (most conveniently around 5’8” tall) stand with his nose at the proper height to be struck by the swinging ball. Have the student hold the ball tightly against his nose and then release it, being sure not to give the ball a push as it is released. The returning ball will just fail to touch, or possibly barely touch, the nose.

**WARNING:** Do not attempt to support the ball from the ceiling mount by tightening the thumb screw; use the pin.
