Place cylinder of propellant (carbon dioxide) in receptacle at end of rotating arm, spherical end first. Cock puncturing tool by stretching spring as far as possible and allowing trigger to engage slot in shaft. Slip end of puncturing tool over the end of the cylinder. Hold the two together, conveniently by placing the first finger of the left hand on the rotating arm and holding the tool between the thumb and middle finger. Release the trigger, conveniently by using the thumb and first finger of the right hand.

**Warning:** It should be needless to say, get your hands out of the way. The rotating arm sometimes starts rapidly.
